

## **Pizza BASIL DELAY**

### **Release Notes**

**basil 1.00** (RANGE light ON at startup)  
release version

### **HOW TO UPDATE:**

1. Disconnect the Basil Pizza from your rack and plug in a micro USB cable
2. Hold the DELAY button and plug the USB into your computer
3. Basil Pizza shows up as an external disk on your computer
4. Copy the pizza\_basil\_ \*version\*.uf2 file to this drive and wait for the Basil Pizza module to update and boot to normal operation
5. Disconnect the USB and install the Basil Pizza in your rack

Pizza shows the firmware version by a static light of the LEDs at startup:

- The release firmware version has the RANGE light ON.
